

Do you identify functional dependencies between the three Variables V1,V2,V3?

(V1) **Corruption Perception Index CPI** / Conniving / Bribes

(V2) **Design + Design Modifications and Variations** and

(V3) **progressive earnings** in comparison to appropriate competition for supply, services and works contracts.

Which experiences are known to you as a member of the Cartel of Silence?

Abscissa **CPI-Ranks** Low rank (New Zealand) – medium – high RANK (Ex-USSR / Russia)

Ordinate: **progressive earnings against competitive procurement prices/sales**

Low (appropriate approach)– Medium – High (disproportionate earnings)

Project Life Cycles:

Design+Procurement (study+tender phase)	Design Modification (implementation phase)	Variations + EVAL (implementation phase)
Design + Specifications linked to Suppliers for the execution of works to connive with the Design consultant + quarry owner/manufacturer: Material characteristics of stones, steel qualities, soil, no clearly specified surface elevations (no MHD) for cut fill borrow Earthworks.	Apply the predetermined sub-breaking points / technological obsolescence of the initial “Employer’s” Design to vary the design & specification for material trading & change in additional resources . Consultants shift illicitly the	Variations bring in Sub-Contracting business to instruct the “selected S/C” in compliance to SC04.4, SC05.1 and Clause 13, with the intentions to earn
	Expenditures for Design Services to the Contractor (Red FIDIC/MDB2010).	commissions / provisions for material trading, labour lease, equipment rent.

Question: Do you understand the **correlations** between the Number of **Variations** (Design Modifications/Value Engineering) and the number of **Notices of claims**? It is not only the inadequate soil exploration and faulty design of the initial-procured Design, it is the “ordinate” isn’t it?

Capacity Building for every one:
