

Risk Equilibrium for non-accountability of the economic strong Party

Explanation:

During the course of a contract, some unexpected conduct of the Client will be occurred.

How could you overcome this obstacles?

Proposal:

The Free Lancer requests for the first half of the contract duration 50% more remuneration per month.

The Clients risk to take over all imponderabilities will be balanced out by 50% deduction of the monthly remuneration.

The per diem / field allowances of minimum 100 USD per presence days = 3.000 USD has to add, of course.

Example:

Contract Duration 6 months

Contract price 96 000 USD > 16.000 USD for 5 working days per week; working day = max 8 hours

Agreement for Risk Equilibrium

Freelancer receives within the first half of Duration 50% more per month

1,2,3 month @ (16000 * 1,5) = 24 000 * 3 = 72 000 USD = **75 % of the Contract Price.**

The Employer will pay the 3rd month remuneration at the end of the 4th month (max. 30 days for payment!)

The overpayment of fee will be compensated by 50% deduction in the remaining time / Contract period.

4, 5, 6 month @ (16.000 * 0,5) = 8.000 * 3 = 25 000 USD = **25% of the Contract Price.**

The per diem / field allowances of minimum 100 USD per presence days = 3.000 USD has to add, of course.

Your opinion please to protect the economical weak Partner for a Hire and Fire conduct towards the Free Lancer.
